

The Future Way of Working

KC Cloud is a secure hosted IT and desktop service managed on your behalf by KC, that enables you to access your files, data and programs from anywhere in the world whilst also reducing your onsite IT costs.

The KC Cloud Solution

As part of the KC Cloud, Software as a Service (SaaS) solution, we will manage your IT infrastructure, host your servers and applications, in our state-of-the-art data centre in Hull city centre. Whilst providing your business with dedicated desktop support and ensuring you have 24/7 access from any PC or laptop to all of your business information.

Having your business applications managed and supported by a trusted partner and using a SaaS model is a natural progression for businesses looking for a future-proofed solution. By letting KC look after your IT infrastructure you can concentrate on managing your business rather than your IT.

Benefits of working in the cloud

KC Cloud provides a flexible way to work outside of the office whilst enabling you to save money on your IT infrastructure and desktop support. See below just how your business could really benefit from this new way of working:

Reduced IT costs and 24/7 IT support

With KC Cloud we look after and manage your servers and applications therefore you will see a reduction in your hardware and maintenance costs. As we provide 24/7 expert desktop support as part of the solution your business will also see a reduction in costs associated with running onsite IT.

Flexibility and freedom to work from anywhere

As we know sitting at your desk all day isn't always realistic and therefore having your business at your fingertips wherever you may be is a real benefit. As more and more people want to have flexible working hours and want to have the ability to work from home, or indeed wherever they are in the world KC Cloud is a solution that can make this a reality.

Scalable and easy to budget low monthly fees

With KC Cloud you only pay a small monthly charge per user which means your business can choose a future proofed way of working without having to make large up-front investments. As the solution can scale up and down easily and whenever required it provides room for business growth.

Secure and high availability

Our data centre gives you unrivalled protection from power failure, physical security and monitoring, theft or flooding giving you the peace of mind that your data is secure and as we understand that data needs to be safe and recoverable, our in built disaster recovery plans ensure business continuity as offsite server backups to disk are included as standard. Even better a secure, high availability infrastructure means the time associated with software crashes, malware and virus intrusions is significantly reduced.

Improved working environment

Your employees will see no difference in their way of working as our hosted service behaves exactly like a PC or laptop. As more of your IT infrastructure is hosted within our data centre you will see a less cluttered office. By working "in the cloud" your business will use less energy, reducing your bills and carbon footprint.

Remote backup

Our remote backup service provides off-site storage of your critical data in-case recovery plans are required on the KC Cloud platform.
